**Job
Description**

NUFFIELD DEPARTMENT OF ORTHOPAEDICS, RHEUMATOLOGY AND MUSCULOSKELETAL SCIENCES (NDORMS)

Postdoctoral Research Associate in Bioinformatics (172445)

Grade 8: Salary in the range of £45,585 - £51,283 per annum

The Kennedy Institute at the University of Oxford has an exciting opening for an experienced bioinformatician to join the group of Associate Professor Stephen Sansom (<https://sansomlab.org>). In this core-funded role you will lead the development of pipelines and tools for the analysis of data from cutting-edge single cell and spatial genomics platforms such as the 10x Chromium and Nanostring CosMx. You will have the opportunity to work with students and postdocs from the Kennedy's world-leading research groups both to provide bioinformatics training and to make contributions to publications in high impact journals. Researchers at the KIR are using cutting-edge approaches to investigate the immune system and the cellular causes of diseases such as atherosclerosis, inflammatory bowel disease and arthritis (<https://www.kennedy.ox.ac.uk/research/research-groups>).

You should have an established track record of code development and contributions to publications or submitted manuscripts in peer-reviewed journals that demonstrates your bioinformatics expertise. A PhD/DPhil (or near completion) in a discipline of direct relevance to bioinformatics and genomic research is essential. In this role, you will undertake code development, provide bioinformatics training and perform scientific research developing and acquiring relevant skills as necessary. You will share code with the bioinformatics community, publishing tools and results in peer-reviewed journals. A good understanding of single-cell/spatial genomics data analysis is essential. The successful applicant will be based at the Kennedy Institute of Rheumatology within the Nuffield Department of Orthopaedics, Rheumatology and Musculoskeletal Sciences.
